

Question: "Please share a few areas in which you would like to address questions using data. Optionally, please feel free to share your questions of interest."

Answer:

While the list of fields where data can be used to answer questions is pretty long and constantly increasing, there are a few fields that I am especially interested into; In particular, the contexts where I would like to learn how to answer questions from data are:

Business and Finance for Market Analysis: in order to analyze market trends and be able to predicting future financial performance, stock prices, and economic conditions.

Science and Research: to be able to analyze and use experimental data to validate hypotheses, and drawing conclusions.

Technology: to improve alorithms and know how to train machine learning models and natural language processing
